

# MEGA COLOR HARDENER

Dry Shake Colour Hardener

## DESCRIPTION

- **MEGA COLOUR HARDENER** is a premixed blend of carefully graded hard aggregates, cement, UV stable pigments and special additives.

## FIELD OF APPLICATIONS

- To produce pigmented concrete.
- To produce stamped (printed) concrete.

## ADVANTAGES

- \* Very long lasting surface and texture.
- \* High mechanical resistance for wearing.
- \* U.V. stable and economical.
- \* Available in range of colors.

## METHOD OF APPLICATION

- Screed and float concrete slab.
- Distribute **MEGA COLOUR HARDENER** into the concrete surface
- The slab base color should be applied over the whole surface and floated using a wooden float.
- Any weak tone areas should be treated with second broadcasting until the concrete has an even , solid color appearance.
- Use mats to produce stamped concrete if required.  
Cure with special curing compound **MEGA CURE** or seal the surface with **MEGA STAMP SEAL**

### STRENGTH in Construction

**CONSUMPTION**

\* 2.5 – 4 kg /sq. m (Depending on variation of colors)

**PACKAGES**

\* 25 kg Bags

**STORAGE**

\* 6 months in sealed packs , under suitable storage conditions.
